

Celebrating the International
Year of Rangelands and
Pastoralists (IYRP)

20
26

Picture Credit: Kalyan Varma

Rangelands, such as grasslands, deserts and mountains, cover nearly half of the Earth. In India, they sustain approximately 1.3 crore pastoralists, whose livestock produce about 53% of India's milk and 74% of its meat, as well as wool and manure.

These ecosystems are critical habitats for many threatened and endemic species of flora and fauna. They sequester carbon and hold immense socio-economic value. Yet they remain undervalued and are misunderstood as degraded ecosystems or barren lands, leaving them vulnerable to land-use conversions.

Climate uncertainty deepens the invisible burdens on pastoralists, leading to risky migrations, physical strain and stigma, pushing youth to abandon pastoral livelihoods and causing a gradual erosion of the intergenerational knowledge systems.

Recognising this urgency, the UN has declared 2026 the International Year of Rangelands and Pastoralists.

25	26	27	28	29	30	31

The Gaddis of Himachal Pradesh migrate seasonally with their goats and sheep to alpine pastures, guided by intimate ecological knowledge. Today, fragmented commons, shrinking grazing routes and changing land uses increasingly disrupt these time-honoured pastoral movements and governance systems.

Picture Credit: Gulzar Hussain

Pastoral life rests on movement and access to land

- 25 Dec, Friday - Christmas Day
- 31 Dec, Thursday - New Year's Eve

Age-old shearing traditions in high alpine ranges, practised just before winter as the herds descend, produce a natural fibre that is renewable and biodegradable. This good quality wool weaves tradition with innovation, telling stories of co-dependency and coexistence with local ecologies.

2026

Celebrating the International
Year of Rangelands and
Pastoralists (IYRP)

Picture Credit: Jayshree Borgohain

The lives of pastoralists are shaped by movement. Pastoralist-reared livestock provide a variety of organic, free-range products, including milk, wool and manure. Their livelihood, optimising the use of landscapes they move through, needs to be recognised as sustainable and resilient. But they face growing challenges due to shrinking commons, dwindling access to natural resources and scarce veterinary care, along with the repercussions of climate change.

For pastoralists, livestock are kin as much as capital, their loss bringing grief and deprivation. Yet, the mental and emotional toll of these disruptions remains invisible, rarely informing policy and climate assessment debates.

The International Year of Rangelands and Pastoralists (IYRP) is important not only for raising awareness among the public, scientists and policymakers, but also for pastoralists themselves. It provides a platform for their voices to be heard on both the global and national stages, helping to create an understanding of the diverse pastoral systems, the innovations and locally rooted solutions from around the world.
